Sensor performance varies under different environmental conditions, please contact SemeaTech for more details.

• Cross-Sensitivity Data

Gas	Concentration (ppm)	Output signal (ppm NO ₂ equivalent)
Hydrogen Sulfide	15	<1
Carbon Monoxide	300	<1
Nitric Oxide	35	0
Chlorine	1	-1~0
Sulfur Dioxide	5	~-5

Note: The cross sensitivity are including but not limited to the above gases. It may also respond to other gases. The data in the table above may vary from different batches of sensors and the changes of test environment. Calibration with cross sensitivity gas is not recommended.

• Safety Note

The sensor is designed to be used in certain instruments for life critical applications. To ensure the sensor functioning per its specifications inside the instrument, it is required to read the instrument user's guide carefully and comply with the calibration procedures by using certified target calibration gas before each use. Failure to do so may cause serious injury and fatality. Please do not open the housing because the electrolyte stored inside is harmful.

It is highly recommended for customers to validate the sensor performance using this document as a reference for their product designs or applications.
