## High Quality Micro Pumps for NDIR Gas Detection

Xavitech gas micro pumps offer the highest quality and performance available. Their uses include gas sampling for NDIR, space applications and where flow accuracy is important. Their unique design outperforms regular diaphragm pumps.

The patented micro pump technology is the best because of the design features that give the pumps their accuracy, reliability and long lifetime:

1. Analog control of flow rate with built in micro-controller
2. No bearings or rotating motors
3. Shorter membrane stroke distance

The **BLACK Edition** micro pumps are the ones with the most functionality and flexibility. The **ORANGE Edition** micro pumps are for applications where the high performance is still needed, but cost is important and lifetime performance is not.

These high reliability micro pumps are available in North America from:
