Unique Applications for Highly Polished Mirrors

Laser Beam Products Ltd. precision metal mirrors have wider applications in many industries where extremely accurate parts are needed. Examples of applications are:

| | |
|--------------------------|-----------------------|
| Fiber optic connectors | Spectroscopy |
| Medical implants | Gas sensing |
| Precision instruments | Formula 1 racing |
| Environmental monitoring | Nuclear installations |

These customer applications find that conventional machining cannot give them the nanometer flatness, arc second parallelism and highly polished surfaces that they need. Laser Beam Products uses unique manufacturing techniques designed for laser quality mirrors to supply a wide range of specialist parts. Their precision lapped surfaces are ideal for many uses including semiconductor inspection equipment, lens molds, precision mating surfaces for seals and alignment aids for scientific research.

Laser Beam Products mirrors and substrates are distributed in North America by:
