Description

EOC-SI-R8300AF combines the advantages of the microscope and the Raman spectrometer. Unique conjugate focusing system makes accurate focusing possible.

The EOC-SI-R8300AF is equipped with a special lens designed for the Raman system, which makes the laser light spot close to the diffraction limit, and the focus information is displayed accurately and directly on the computer through the 5 million cameras.

Overcomes the problem of collecting Raman's signal in the ordinary Raman system slightly higher or lower than the actual optimal focal plane, thus improving the spectral quality.

EOC-SI-R8300AF unique software optical path switching part perfectly solves the loss of camera imaging time road and realizes the separation of camera imaging and Raman signal collection, thus obtaining the optimal strength.

Meanwhile EOC-SI-R8300AF used specifically for high-performance Raman micro Raman system optimization, sensitivity, signal-to-noise ratio, stability, etc., are the industry leading level, guarantee Raman study.
